

1. All panel components must comply with the specifications listed in the detail column.
2. During the panel's dielectric strength test of no less than 1.5 kV/5 mA, the insulation test to ground must show no abnormalities for 3 to 5 seconds.
3. The main view of the coating should be TQ1 (S) A Q/SC J4, and the non-main view should be TQ2 (S) A Q/SC J4. Welding quality should follow Class Z welded components in Q/SC J9.
4. The wiring harness should be properly bundled, without any disorder, and poor conditions such as detours or looseness are not allowed.
5. Terminal pull-out resistance: Low voltage: 70 N; High voltage: 2.5 mm² (UL14#): 220 N, 4 mm² (UL12#): 330 N, 6mm (UL10#): 440N.

6. All components comply with the requirements of the EU RoHS 2.0 Directive and REACH regulations.
7. The panel should meet the requirements of the CE certification directive.
8. Other technical requirements shall be executed according to Q/AP-FZO 1 (General Panel Standard). Model: Control Panel Assembly / 7kW Variable Frequency Silent Generator Set / 230V/50Hz
